

## Software Version: v1.2.10

ZincBlue2

Date: 25 August 2021

Document Number: SRN1519

### Introduction

Version 1.2.10 contains ZincBlue2 UPS firmware updates for network-related bug fixes pertaining to software upgrade applications, and the addition of a Spanish language version for the LCD display of the firmware.

Econolite strongly recommends installing this update if you access ZincBlue2 systems remotely over a network.

### Firmware and Software

Version 1.2.10

Release Date: 8/16/2021

#### UPS 1000W/1500W

- Revision changed to 1.2.10.

#### Enhancements

- A Spanish translation firmware version is now available for the LCD display.

---

**Note:** This separate firmware package created for customers requiring Spanish language on the LCD display does not include Spanish language translation for the ZincBlue2 software website application.

---

- The Network screen on the LCD display now shows the IP address and network port being used.

#### Bug Fixes

- Ease-of-use network configuration includes new improvements. Any modifications made to the network configuration via the ZincBlue2 software now cause the UPS 1000W/1500W to reset itself to ensure proper network stack operation.
- Resolved the issue in which a firmware update failed unless the UPS was set to the default IP Address.
- Resolved the issue found in v1.2.9 which required the UPS to be rebooted after making an IP Address change to connect with the web browser interface.
- You can now upgrade the v1.2.4 firmware without losing your network configuration. Version 1.2.10 firmware migrates the network configuration forward, retaining your settings.

## Software Version: v1.2.10

ZincBlue2

Date: 25 August 2021

Document Number: SRN1519

### 500W Module and Panel Battery
